

Qi Standard Smart Phone Wireless Charger

Functional parameters:

- 1 input voltage: DC4.3 V~5.5 V / 1.5~2 A, over this range of voltage alarm and stop charging
- Output voltage: 5 V + 0.1 V,
- Charging current: 500 -1000 mAh
- Charging power: maximum can reach 5 W
- Conversion efficiency: greater than 73 %
- Transmission distance: maximum 10mm, recommended transceiver distance 2 mm~4 mm
- Standby power: average power is less than 50 mW
- Over temperature protection: when the temperature is higher than 60 degrees, it will automatically stop charging for 1 minutes, and then recharge the recharge after the temperature drops.
- Over current protection: when the output current is greater than 1.5A when charged, the charge is automatically stopped and the charger is prevented.
- Executive standard: Qi wireless charging standard

Product weight:

Whether to support foreign body detection: support

Indicator light function: charging light and blue light, standby light red light, fault double flash
